Next Stop: Europe! – Mobility Planning and Sustainable Strategies for improving public transport efficiency in Dilijan community cluster (Applicant: Dilijan Municipality, Budget: EUR 500,000)

The project will create new inter-community mobility service provider, a transport company that will serve all 7 communities of the Dilijan consolidated community cluster and the population of around 15,000. The improved mobility will contribute to a better access for the population, in particular to poorest and disadvantaged segments of the population, to basic social needs.

Reduction of poverty in Urtsadzor community cluster by developing self-employment opportunities (Applicant: Foundation for Preservation of Wildlife and Cultural Assets (FPWC), Budget: EUR 500,000)

The project will create income and employment opportunities in the Urtsadzor community cluster for at least 80 households, targeting women who head households, unemployed youths and refugees. Business partnerships and new multi-level platforms of cooperation will be established between the communities of the cluster, resulting in implementation of at least 15 jointly developed business plans, such as establishment of Bed & Breakfasts for the purpose of local tourism, small-scale manufacturing, agricultural production, and processing.

Clean Alliance: Accessible Services for Goris and Sarnakunk Community Clusters (Applicant: Sisian Community Union, Budget: EUR 500,000)

The project will upgrade the Solid Waste Management (SWM) organization of the Goris Cluster and create a new SWM organization in Sarnakunk cluster. It will further equip them with the minimum machinery/equipment and improve the required infrastructure to provide effectively waste management services in both clusters. The project will also help the two

community clusters to elaborate solid waste management strategic plans and incorporate them in 4-year community strategic planning.

Summarized efforts, multiplied effects (Applicant: Work and Motherland, Budget: EUR 380,000)

The project will upgrade agricultural and transport infrastructures of the Vayk cluster through creating small agricultural machinery station, a wholesale agricultural market in Vayk, procuring trucks for collective transportation of the agricultural produce of farmers in the community cluster, as well as procuring two light passenger busses which will serve as school busses and service the rest of the community population to improve their mobility. The project will support the LSG bodies of the new community cluster to improve the waste management services, pre-school and extra-curricular, agricultural and inter-community transportation services.
